Kelbari

Internship Program · 2026

☕ Java Development internship.

A guided, portfolio-building track. Pick your tasks, build real projects, and share your work. Top performers can earn a Letter of Recommendation and a pathway to a job at Kelbari. One connected team for web development, digital marketing and graphic design, based in Bahawalpur, Pakistan.

Track guide & task cards
kelbari.net

Apply via the form in our
Kelbari LinkedIn post

Before you start

This checklist applies to every intern on every track. Complete it before submitting any task.

Profile & setup (do this first)

01 Complete your LinkedIn profile. If you need help, search “LinkedIn profile optimization and resume building” on YouTube and watch a tutorial before starting any project work.

02 Search “how to build a personal portfolio” on YouTube and watch a walkthrough — a simple portfolio makes your internship work easy to showcase.

03 Create your GitHub repository. Name it exactly: KELBARI (all caps). This single repository holds all your task submissions across the internship. Do not create a separate repo per task.

04 Connect your GitHub account and make sure your profile is public so mentors can review your work.

Per-task workflow (repeat for every task)

01 Step 1 — Review. Read the task card for your chosen task carefully. Understand the full feature checklist before writing a single line of code or starting a design.

02 Step 2 — Build. Develop your project, following the tech stack and requirements in the task card.

03 Step 3 — Push to GitHub. Commit your completed project to your KELBARI repository using this folder format, with no exceptions: KELBARI/[Track]-[Level or Task]-[ProjectName]/ — for example KELBARI/WebDev-L1-LandingPage/ or KELBARI/Python-Task2-BMICalculator/. Each folder must contain your source code, a README.md describing the project, and any relevant screenshots or output files.

04 Step 4 — Record a demo video. Record a short screen walkthrough of your finished project. Begin with a 2-second title card showing (1) your full name, (2) your track, and (3) the task title. After the title card, show the project working end to end — not just screenshots. For report-based tasks, narrate your document on screen.

05 Step 5 — Post to LinkedIn. Share your demo video in a LinkedIn post. Tag Kelbari and include the hashtag #kelbari, plus relevant domain hashtags (for example #webdevelopment, #datascience, #python, #cybersecurity, #internship).

06 Step 6 — Engage with peers. Watch the LinkedIn demo videos of at least two other interns from your cohort and leave a thoughtful comment on each — engage with their work, ask a question, or offer a constructive observation. Generic comments like “Great work!” don't count.

07 Step 7 — Submit. Submit your task through the submission form shared with you by Kelbari, including your GitHub repository link.

08 Step 8 — Evaluation. After the submission deadline, your work is reviewed. On successful completion you receive your Kelbari Completion Certificate and, where applicable, a Letter of Recommendation.

Key reminders

01 GitHub repo name must be exactly KELBARI (all caps) — any other name may cause your submission to be missed.

02 Follow the strict folder format KELBARI/[Track]-[Level or Task]-[ProjectName]/ — inconsistent naming delays review.

03 The first 2 seconds of every demo video must show your full name, track and task title as a static frame.

04 Thoughtful comments on at least two fellow interns' videos are required for completion.

05 Check your track's completion rule below and don't under-submit.

06 All work must be entirely your own. Plagiarism or copied work leads to cancellation of your submission and certificate.

What you receive from Kelbari

01 Guidance and mentorship from the Kelbari team throughout the program.

02 A Certificate of Completion once you finish your track's requirements.

03 For top performers: a Letter of Recommendation, a letter of appreciation, and a pathway to a job or paid role at Kelbari and related opportunities.

☕ Java Development

Completion rule. Complete at least 2 of the 5 tasks below.

TASK 1

Online Reservation System

Objective. Build a GUI-based transport reservation system where users log in, book tickets and cancel bookings using a reference number.

```
Tech: Java (Swing or JavaFX), JDBC, MySQL or SQLite
```

FEATURE CHECKLIST

- [ ] Login form; access denied for invalid credentials
- [ ] Reservation form: passenger name, number, class, date, source and destination
- [ ] Book button that saves the reservation and generates a unique reference number
- [ ] Confirmation dialog with booking details
- [ ] Cancellation form: reference-number input + Fetch to show details
- [ ] Confirm-cancellation dialog that removes the booking
- [ ] Basic validation: no empty fields, valid date, numeric number

> **Where to learn:** Search “Java Swing JDBC login form tutorial” on YouTube. For the database, search “SQLite Java JDBC setup”. Reference the Java docs for JFrame, JTextField, JComboBox and PreparedStatement (to prevent SQL injection).

TASK 2

Number Guessing Game

Objective. Build a console or GUI game where the computer picks a random number and the user guesses it with higher/lower hints.

`Tech: Java (console or Swing)`

FEATURE CHECKLIST

- [ ] Random number 1–100 each round
- [ ] Prompt the user for a guess
- [ ] Respond “Too High!”, “Too Low!” or “Correct!”
- [ ] Visible attempt counter
- [ ] Maximum attempts (e.g. 7) with a “You Lost!” message revealing the number
- [ ] “Play Again” option
- [ ] Score across rounds (“Round X — guessed in Y attempts”)
- [ ] (Bonus) Difficulty levels (Easy/Medium/Hard)

> **Where to learn:** Search “Java number guessing game tutorial beginners” on YouTube. Core concepts: java.util.Random, Scanner, while loops and if-else. For a GUI, search “Java Swing simple game tutorial”.

TASK 3

ATM Interface

Objective. Build a console simulation of an ATM where users authenticate with a PIN and perform standard transactions.

`Tech: Java (console, object-oriented with multiple classes)`

FEATURE CHECKLIST

- [ ] Prompt for User ID and PIN; deny access after 3 wrong attempts
- [ ] Menu: Transaction History, Withdraw, Deposit, Transfer, Quit
- [ ] Balance check before withdrawal/transfer with “Insufficient Funds”
- [ ] Transactions stored in an ArrayList and shown in history
- [ ] At least 5 classes: ATM, Account, Transaction, Bank, Main

> **Where to learn:** Search “Java ATM machine project OOP tutorial” on YouTube. A classic OOP exercise — study encapsulation, ArrayList for history and switch-case for the menu. Reference GeeksforGeeks or Javatpoint for OOP concepts.

TASK 4

Online Examination System

Objective. Build a GUI examination system where students log in, answer MCQs within a timer and are auto-submitted when time runs out.

`Tech: Java, Swing`

FEATURE CHECKLIST

- [ ] Login screen that loads the exam on success
- [ ] Profile update: change display name and password before starting
- [ ] Exam screen: one MCQ at a time with 4 radio options
- [ ] Next and Previous navigation
- [ ] Always-visible countdown timer that auto-submits at zero
- [ ] Manual submit with a confirmation dialog
- [ ] Result screen: score, time taken, correct/incorrect breakdown
- [ ] Close-button during exam triggers “Are you sure?”
- [ ] Logout on the result screen

> **Where to learn:** Search “Java Swing MCQ exam timer tutorial” on YouTube. Key components: javax.swing.Timer, ButtonGroup + JRadioButton, and CardLayout for switching screens.

TASK 5

Digital Library Management System

Objective. Build a web-based library system with Admin and User roles that manages a book catalogue, issuing/returns, fines and advance bookings.

```
Tech: Java (Servlets/JSP or Spring Boot), MySQL or SQLite, HTML/CSS
```

FEATURE CHECKLIST

- [ ] Admin login with full access
- [ ] Add, edit and delete book records (title, author, ISBN, category, quantity)
- [ ] View all issued books and due dates
- [ ] View and manage member accounts; mark fines as paid
- [ ] User registration and login
- [ ] Browse by category and search by title or author
- [ ] Issue a book (decrements quantity, records due date) and return a book (increments)
- [ ] Fine auto-calculated if overdue (e.g. Rs 5 per day)
- [ ] Advance booking for a currently issued book
- [ ] Contact/query form stored for the admin to view

> **Where to learn:** Search “Java Spring Boot library management system tutorial” or “Java Servlet JSP CRUD project”. For schema design, search “library management system database design”. Reference Baeldung for Spring Boot patterns.
